

JinkoSolar Empowers Vietnam's C&I Sector with Innovative 1.06MWh Energy Storage System

With the growing demand for sustainable energy solutions, JinkoSolar has successfully implemented a cutting-edge 1.06MWh Energy Storage System (ESS) for a leading industrial client in Vietnam. This innovative system is designed to optimize energy usage, reduce costs, and ensure a reliable power supply for the client's operations.

The ESS system, powered by JinkoSolar's advanced lithium-ion technology, is capable of storing up to 1.06MWh of energy. This allows the client to store excess energy generated during off-peak hours and use it during peak demand periods, significantly reducing their reliance on the grid and lowering their overall energy costs. The system is also equipped with intelligent energy management software that monitors and controls the storage process, ensuring optimal performance and safety.

The ESS system is housed in a robust, weather-resistant enclosure, ensuring its longevity and reliability in the industrial environment. It is designed to operate in a wide temperature range, from -20°C to 40°C, and is capable of handling high-voltage applications. The system's modular design allows for easy expansion and maintenance, making it a highly flexible and scalable solution for the client's needs. The implementation of this ESS system marks a significant milestone in JinkoSolar's commitment to providing innovative energy storage solutions for the C&I sector in Vietnam.
